

TYPE2LEARN

LEGAL & PLATFORM TERMS

Terms of Service

Rules for safe, fair and responsible use of the Type2Learn learning platform

Prepared for: Muhammad Taha Bin Zaeem

Draft date: 18 July 2026 | **Contact:** support@type2learn.tech

Publication draft. Replace all marked company, billing and jurisdiction placeholders before launch.

Contents

How to use this document

This PDF is structured as publication-ready page copy followed by implementation notes and launch checks. Items marked as placeholders must be replaced before the page goes live.

A Plain-language summary

- 1 Who operates Type2Learn
 - 2 Acceptance and related documents
 - 3 Eligibility, minors and authority
 - 4 Accounts and security
 - 5 The Type2Learn service
 - 6 License and permitted use
 - 7 Acceptable use
 - 8 Learning integrity and anti-skip systems
 - 9 User content and projects
 - 10 AI-assisted features
 - 11 Neuroinclusive and accessibility features
 - 12 Educational, health and professional disclaimers
 - 13 Profiles, leaderboards and social features
 - 14 Certificates, badges and rankings
 - 15 School and organization use
 - 16 Privacy and student data
 - 17 Paid services, trials and refunds
 - 18 Third-party services and open-source software
 - 19 Type2Learn intellectual property
 - 20 Feedback and product research
 - 21 Service changes and availability
 - 22 Suspension and termination
 - 23 Disclaimers
 - 24 Limitation of liability
 - 25 Indemnity
 - 26 Disputes and governing law
 - 27 Changes to these Terms
 - 28 Contact
- Appendix A** Acceptable-use examples
- Appendix B** School-specific terms
- Appendix C** Launch checklist

Document status - publication draft

This is a detailed product and legal-content draft, not a substitute for advice from qualified counsel in every market where Type2Learn operates. Before publication, confirm that every statement matches the actual product, vendors, storage locations, billing model, school contracts and company registration details.

Core launch assumptions

- The operator legal entity and registered address remain placeholders until company registration is confirmed.
- Type2Learn is an educational platform, not a medical, psychological, diagnostic, emergency or professional-advice service.
- Learner accounts are private by default; public profiles, leaderboards and external sharing are optional and age-restricted.
- No paid plan, refund rule, subscription renewal or governing-law statement should be published until it matches the actual launch model.
- Schools receive a separate agreement and data processing addendum; where those conflict with these public Terms, the signed agreement controls.

A. Plain-language summary

The essentials

Use Type2Learn to learn, practice, build and demonstrate skills. Keep your account safe, submit work you are allowed to share, respect other people, and do not attack, scrape, cheat or misuse the platform. Children need the involvement or authorization of a parent, guardian or school.

- **Your account is yours.** Do not share credentials, impersonate anyone or bypass age and school controls.
- **Learning requires honest participation.** Do not automate typing, fake completion, manipulate rankings or submit copied work as your own.
- **You keep ownership of your work.** You give Type2Learn a limited license to host and process it so the service can function.
- **AI can make mistakes.** Check generated explanations and code; teachers and learners remain responsible for decisions.
- **Accessibility settings are user controls, not diagnoses.** Type2Learn does not infer or certify a medical condition from typing behavior.
- **Public sharing is optional.** Think carefully before sharing a profile, certificate, username, project or achievement.
- **The service will evolve.** Features, courses and availability may change, but material legal or payment changes will be communicated appropriately.
- **Legal limits vary.** Nothing in these Terms removes rights that applicable consumer, child-safety, education or privacy law does not allow us to remove.

1. Who operates Type2Learn

These Terms govern use of Type2Learn, including type2learn.tech and any related application, lesson, profile, educator dashboard, certificate-verification page, API or service that links to them. "Type2Learn," "we," "us" and "our" refer to the operator of the service, founded by Muhammad Taha Bin Zaeem.

Before publication, this section must identify the registered legal entity, registration number where required, registered or principal business address and a postal notice address. Until those details are inserted, this document is a product and legal drafting specification rather than final operative terms.

2. Acceptance and related documents

By creating an account, clicking an acceptance control, purchasing a plan, using a school-provided account or otherwise accessing the service, the person using Type2Learn agrees to these Terms to the extent permitted by law. A parent or guardian who authorizes a child account agrees on the child's behalf. A school representative accepts only if authorized to bind the school or organization.

These Terms work with the Privacy Policy, child-friendly privacy notice, cookie notice, acceptable-use rules, school agreement, data processing addendum, course-specific rules, promotion terms and any order form. A signed order form or school agreement controls over conflicting public language for that customer.

3. Eligibility, minors and authority

- Adult users must have legal capacity to enter an agreement in their location.
- Users below the applicable age of digital consent may use the service only through a verified parent or guardian path or a school-authorized account.
- A child must not falsely state age, create an adult account or independently enable public-sharing features that require adult approval.
- A teacher, administrator or organization representative must have authority to create classes, import rosters, invite learners and agree to school terms.
- Type2Learn may request reasonable age, identity, consent or authority verification and may restrict an account until verification is complete.

4. Accounts and security

Users must provide accurate information, keep it reasonably current and protect passwords, passkeys, recovery codes and devices. A user must promptly report suspected unauthorized access to support@type2learn.tech. Activity performed through an account may be treated as the account holder's activity unless reported and investigated.

Schools are responsible for authorized administrator accounts, roster accuracy and timely removal of former staff and learners. Administrators should use unique accounts, role-based permissions and multi-factor authentication where available.

Usernames, display names and profile content must not reveal unnecessary personal information, especially for minors. Type2Learn may change or remove identifiers that impersonate others, violate rights, expose a child, contain abuse or create security risk.

5. The Type2Learn service

Type2Learn is designed around active, typing-based learning. Features may include lessons, code exercises, quizzes, projects, guided repetition, pathways, focus sprints, predictable activity schedules, read-aloud or sound feedback, progress analytics, badges, certificates, profiles, educator tools, integrity checks and AI-supported content or feedback.

Descriptions, screenshots and prototypes may show planned features that are not yet available. A public page must clearly distinguish released, beta, experimental and conceptual features. No screenshot or roadmap promise creates a guarantee that a feature will launch or remain available.

6. License and permitted use

Subject to these Terms, Type2Learn grants each authorized user a personal, limited, non-exclusive, non-transferable, revocable license to access and use the service for lawful learning, teaching, administration or evaluation. School rights may be expanded in an order form.

The license does not include ownership of the platform, redistribution of course libraries, resale, commercial hosting, creation of a competing dataset, public mirroring, model training on protected content, reverse engineering

except where law expressly permits it, or access through unapproved automation.

7. Acceptable use

A user must not use Type2Learn to harm people, systems, learning communities or the integrity of the service.

- No harassment, threats, hate, sexual exploitation, grooming, doxxing or encouragement of self-harm.
- No content that unlawfully exploits or endangers a child; suspected child sexual exploitation material may be preserved and reported as required.
- No malware, phishing, credential theft, destructive code, denial-of-service activity or attempts to gain unauthorized access.
- No scraping, bulk extraction, high-volume bots or automated account creation without written authorization.
- No unlawful, infringing, deceptive or privacy-invasive content.
- No bypassing payment, consent, school, age, moderation, rate-limit, exam or security controls.
- No using lessons to collect secrets, passwords, private keys, medical records or unrelated personal information.
- No commercial advertising, spam or solicitation in learner-facing areas unless Type2Learn expressly provides a controlled feature for it.

8. Learning integrity and anti-skip systems

Type2Learn may use interaction signals such as typing cadence, corrections, focus changes, navigation behavior, paste events and completion patterns to provide feedback and detect automated or non-participatory completion. These systems support learning integrity but are not infallible.

Users may not use scripts, macros, bots, copy-paste automation, remote operators or other methods to falsely record work as completed. Educators must not treat an automated flag as conclusive proof of misconduct without review, context and an opportunity for the learner to respond.

Fairness requirement

Integrity features must account for assistive technology, alternative input methods, motor differences, language learning, intermittent connectivity and approved accommodations. Accessibility use must not be treated as cheating.

9. User content and projects

Users retain ownership of original content they create and submit, such as code, writing, projects, comments and portfolio material. The user grants Type2Learn a worldwide, non-exclusive, royalty-free license to host, copy, transmit, display, format and process that content only as needed to provide, secure, support and improve the service and, where the user chooses, publish or share it.

The license ends when content is deleted, except for reasonable backup periods, legal preservation, content already shared by others, de-identified analytics and records required to administer a certificate or resolve a dispute. Type2Learn does not obtain permission to sell a learner's project or use it in marketing merely because it was submitted.

Users must have the rights and permissions needed for submitted content. A school should establish its own rules for student work, copyrighted materials, open-source licenses, citations and academic honesty.

10. AI-assisted features

AI may help generate practice questions, explanations, hints, summaries, code feedback, accessibility transformations or content drafts. AI output may be incomplete, biased, insecure, outdated or wrong. Users should verify important output and must not rely on AI as the sole basis for grades, disability decisions, safety decisions, discipline, admissions or other consequential outcomes.

Prompts and outputs are subject to the Privacy Policy. Learner content should not be used to train public or third-party foundation models by default. Type2Learn may rate-limit, filter, refuse or review AI interactions to protect safety and service integrity.

Users may not use Type2Learn AI to generate unlawful exploitation, targeted harassment, credential theft, malicious software, exam cheating or content that violates another person's rights. Security education involving dual-use material must be scoped and supervised appropriately.

11. Neuroinclusive and accessibility features

Type2Learn aims to offer configurable controls for motion, sound, pacing, repetition, literal instructions, focus structure, contrast and other learning preferences. These settings are intended to give learners agency and should never be used to label, diagnose or rank a learner by disability.

A feature may not work perfectly with every assistive technology, browser or device. Users should report barriers to support@type2learn.tech. Schools remain responsible for legally required accommodations, individualized education plans and professional decisions beyond the service's scope.

12. Educational, health and professional disclaimers

Type2Learn provides educational technology and general learning support. It does not provide medical, psychological, psychiatric, occupational-therapy, speech-therapy, legal, financial, emergency or other licensed professional services. No lesson, accessibility option, score, typing pattern or AI response is a diagnosis or treatment recommendation.

Course completion does not guarantee a grade, employment, certification, admission, professional license, income or mastery. Educators and learners remain responsible for checking curriculum fit, safety instructions, code behavior and external requirements.

13. Profiles, leaderboards and social features

Profiles, achievements, projects, avatars, messages, leaderboards and sharing features may be offered. Minor accounts should be private by default, use limited identifiers and require appropriate adult or school controls before public visibility.

Users are responsible for content they intentionally make public. Type2Learn may moderate, hide, remove, restrict or preserve content for safety, legal compliance, rights protection or enforcement. Private messaging involving minors should be limited, safety-designed and subject to reporting and blocking controls.

14. Certificates, badges and rankings

Certificates, badges, streaks, XP, ranks and skill estimates describe participation or performance within Type2Learn under the rules in effect at the time. They are not accredited qualifications unless a page expressly identifies the accrediting body and scope.

Type2Learn may revoke or correct a credential obtained through fraud, technical error, unauthorized automation or material rule violation. Certificate-verification pages should expose only the minimum information needed to verify authenticity, and public verification may be disabled by the learner, parent or school where appropriate.

15. School and organization use

A school or organization may administer accounts, assign work, access progress, configure sharing and request exports or deletion according to its agreement and applicable law. The organization is responsible for lawful authority, notices, approvals, roster accuracy, educator permissions and its own decisions based on service data.

Type2Learn will process school data only for contracted educational and operational purposes and will not independently use student data for targeted advertising, data brokerage or unrelated profiling. The signed school agreement and data processing addendum should state ownership, security, subprocessors, retention, incident notification and exit procedures.

16. Privacy and student data

The Privacy Policy explains what information Type2Learn processes and the controls available to users, parents and schools. By using the service, users acknowledge that processing described there is necessary to operate their accounts. Consent is requested separately where the law requires consent rather than contract, school authorization or another legal basis.

Users must not upload personal information about another person without authority. Educators should avoid entering disability, medical, disciplinary or family information unless the school has determined that it is necessary, lawful and supported by the contract.

17. Paid services, trials and refunds

Launch placeholder

Do not publish this section until Type2Learn has chosen currencies, prices, taxes, billing provider, trial rules, renewal notices, cancellation path and refund policy. Consumer laws in the purchaser's location may create non-waivable rights.

A final paid-services section should specify: the exact amount and billing period before purchase; whether renewal is automatic; when the account is charged; accepted payment methods; taxes; price-change notice; trial conversion; cancellation timing; data access after cancellation; refund eligibility; school invoice terms; and how charge disputes are handled.

Unless an order form says otherwise, a school subscription should not renew or expand seats without the notice and authorization required by the contract. Failure of a school to pay should not cause learner work to be immediately destroyed; a reasonable export and resolution window should apply.

18. Third-party services and open-source software

Type2Learn may integrate authentication, hosting, analytics, payment, error reporting, AI, video, code execution, communications or school roster services. Third-party services may have separate terms and privacy practices. Type2Learn is responsible for selecting and configuring its vendors, but it does not control a third-party site a user independently visits.

Open-source components remain governed by their respective licenses. Type2Learn must preserve required notices and may publish a software-notices page. Users may not remove attribution or license notices from distributed Type2Learn materials.

19. Type2Learn intellectual property

The service, platform code, interfaces, course structure, graphics, logos, badges, certificate designs, trademarks and other Type2Learn materials are owned by Type2Learn or its licensors. Except for the limited license in these Terms, no right is granted by implication.

"Type2Learn," its logos and related marks may not be used to suggest endorsement, partnership or accreditation without written permission. Factual references and lawful nominative use remain permitted.

20. Feedback and product research

Users may voluntarily send suggestions, bug reports or ideas. Type2Learn may use non-confidential feedback without payment or restriction, but this does not transfer ownership of a submitted project or confidential information. Do not submit a trade secret unless a written confidentiality agreement applies.

Research participation must be optional and separately explained. Declining a study must not reduce ordinary educational access. Identifiable child or school research requires appropriate consent, school authorization and ethical safeguards.

21. Service changes and availability

Type2Learn may add, modify, beta-test, limit or remove features to improve learning, security, accessibility or sustainability. Scheduled maintenance and outages may occur. Type2Learn should give reasonable notice when a material change removes paid functionality or requires a school to export data.

Roadmaps, estimated release dates, demonstrations and prototypes are plans rather than guarantees. Type2Learn should maintain status and support channels appropriate to its scale.

22. Suspension and termination

Type2Learn may warn, restrict, suspend or terminate an account when reasonably necessary to address security risk, unlawful behavior, child safety, serious or repeated rule violations, nonpayment, unauthorized automation, infringement or a legal requirement. Emergency action may occur without advance notice when delay creates risk.

Where appropriate, the user or school will receive a reason and appeal path. Enforcement should be proportionate and should not discriminate against assistive technology or disability-related behavior. A terminated user may request an export where legally and technically permitted, excluding information that would compromise safety or another person's rights.

23. Disclaimers

To the maximum extent permitted by law, the service is provided "as is" and "as available." Type2Learn does not promise uninterrupted operation, error-free content, perfect accessibility, complete security, compatibility with every device, a particular educational outcome or the accuracy of AI-generated output. These disclaimers do not exclude warranties or rights that applicable law does not permit Type2Learn to exclude.

24. Limitation of liability

A final liability clause must be reviewed for every launch market and customer type. Subject to non-waivable law, Type2Learn should not be liable for indirect, incidental, special, consequential or punitive loss, or loss of profits, opportunity or data, arising from the service. A proposed aggregate cap for direct claims is the greater of fees paid by the claimant for the service during the preceding 12 months or an amount set by local counsel for free users.

No limitation should apply where prohibited, including liability that cannot lawfully be limited for fraud, deliberate misconduct, death or personal injury, child-safety duties, certain privacy violations or statutory consumer rights.

25. Indemnity

To the extent permitted by law, an adult business user or organization may be required to defend and indemnify Type2Learn against third-party claims caused by that party's unlawful content, infringement, unauthorized administration or material breach. This clause should not be imposed on a child and must not reduce a school's or consumer's mandatory rights.

26. Disputes and governing law

Counsel decision required

The founder is based in Pakistan, but users and schools may be elsewhere. Select the contracting entity, governing law, courts, consumer carve-outs, school procurement requirements and any mediation or arbitration only after legal review. Do not copy a U.S.-style mandatory arbitration clause into a global child-learning service without market-specific analysis.

A balanced final process should first encourage written notice to support@type2learn.tech and a good-faith effort to resolve the issue. It should preserve access to regulators, small-claims procedures, urgent injunctive relief and non-waivable consumer rights. School disputes should follow the signed agreement.

27. Changes to these Terms

Type2Learn may update these Terms to reflect product, security, legal or business changes. The service should show the effective date and provide reasonable advance notice of material changes. Renewed affirmative acceptance should be obtained where required, especially for children, school accounts, pricing or materially expanded data use.

28. Contact

Questions about these Terms may be sent to support@type2learn.tech. Before publication, also insert the operator's legal name, postal address, company registration details and any formal notice method required by law or contract.

Founder: Muhammad Taha Bin Zaeem. Proposed effective date: upon publication. Last draft update: 18 July 2026.

Appendix A - Acceptable-use examples

Permitted example	Not permitted
Using approved screen readers, speech input, alternative keyboards or accommodations	Treating assistive technology as cheating or using automation to fake completion
Discussing code vulnerabilities in a controlled educational lab	Deploying malware, stealing credentials or attacking systems
Quoting a source with attribution within license limits	Copying a paid course library or submitting another person's project as your own
Sharing a parent-approved certificate link	Publishing a minor's private profile, school or location without authorization
Using AI to get a hint and then checking the answer	Using AI or a bot to impersonate participation in an assessment
Reporting a security weakness privately and responsibly	Exploiting, selling or publicly disclosing learner data
Creating a pseudonymous learner display name	Impersonating a real person, school, brand or staff member

Appendix B - School-specific terms

- School determines authorized educational purpose, eligible users and lawful notices or consent.
- Type2Learn processes student data only on documented school instructions and for service delivery.
- School retains control of education records and may request access, correction, export and deletion.
- Type2Learn maintains role-based access, security controls, incident notification and a current subprocessor list.
- No targeted advertising, sale, data brokerage or unrelated commercial profiling of student data.
- No public profile or external sharing for minors unless configured and authorized by the school and applicable adult.
- Automated flags are reviewed by a human before disciplinary or high-stakes action.
- Contract termination includes a defined export period and verified deletion schedule.
- Accessibility and accommodation decisions remain with qualified school professionals and families.
- The signed order form, DPA and security schedule control where they differ from public terms.

Appendix C - Terms launch checklist

- Insert legal entity, address, company registration and formal notice details.
- Confirm minimum age, parent-consent flow and school authorization language for launch countries.
- Finalize billing, trials, auto-renewal, cancellation, refund and tax text—or remove paid-services claims.
- Have local counsel approve governing law, dispute process, disclaimer, liability cap and indemnity.
- Publish linked Privacy Policy, child notice, cookie notice, Acceptable Use Policy and school DPA.
- Ensure product behavior matches integrity, public-profile, certificate, AI and deletion statements.
- Create moderation, child-safety escalation, law-enforcement request and account appeal procedures.
- Confirm open-source notices, trademark ownership and user-content takedown process.
- Add version history, acceptance logging and material-change notification.
- Run accessibility and plain-language review with neurodivergent learners, educators, parents and professionals.
